DIAGNOSTIC ENGINEERING

Why readip ?

SMALL
(4 x 4 x 4 cm)

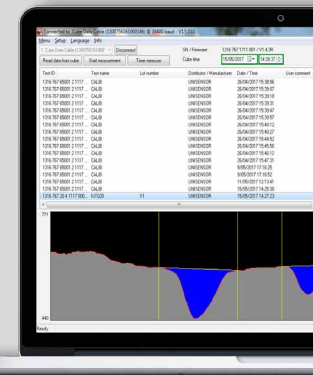

LIGHT
(40 g)

FAST
(3 seconds)

The internal memory can store 100 results. All data can be transferred easily to a PC via a readip specific USB cable. The readip software allows a clear data presentation and remote measurements.

What is readip ?

Unisensor's readip rapid test reader offers an optimal tool for the qualitative analysis of Unisensor's dipstick tests in a small cube of only 4 cm sides.

It delivers fast and accurate results and is a cost-effective solution for any field practice. By operating with only a single button this device is especially user-friendly. Use it on a truck or in the field. Wherever you need it!

No maintenance is required. The stored data can be easily transferred to a PC via a special USB cable.

Now available for the following kits

TwinSensor
KIT020

BetaXpress
KIT044

TriSensor
KIT035

How To Use readip

By pressing the button, you will be presented with the start screen.

The readip withholds the last reading method used. To perform a new reading, press the button again. If you want to change to another kit reference, place the RFID card on top of the readip.

[OPTIONAL] Place the proper RFID card on the readip.

[OPTIONAL] Press the button more than 1 second if you want to check the reading method.

Insert the test and press the button again. Please, refer to the Instruction For Use for detailed information regarding the dipstick test procedure.

The measurement is processed.

After approximately 3 seconds the qualitative results will scroll through the screen. The readip turns off automatically after 50 seconds.
