

Nipple Teats

for a more natural feeding

LIFE STARTS WITH US

A moment of affection, comfort and connection that is repeated 6 to 8 times a day is the meal, which is extremely important for an ideal development of the small sensitive patients that are our newborns.

Preserving each of these privileged moments at its best, even when breastfeeding is not possible, is a priority for parents and hospital staff, while ensuring that milk is dispensed in a hygienic and secure manner.

Facilitate insertion into the mouth and the natural movement of the tongue during feeding with the baby bottle and the **Beldico Nipple teat**

Beldico teats are single-use medical devices intended for the oral administration of breast milk, reconstituted milk or other type of liquid feed, with or without the addition of medicinal products or nutrients, to premature or vulnerable infants staying in a medical setting, and requiring an appropriate diet.

Manufactured in a clean room, then sterilized by ETO or treated by Gamma ray, Beldico single-use teats limit the risk of developing external germs and preserve the balance of breast milk.

Beldico has designed the **Nipple** teat, a teat close to the breast shape, for easier feeding and a smoother transition between breast feeding and bottle feeding, which meets the needs of the **neonatal, maternity** and **paediatric** departments.

Suited to hospital practices

- **PRACTICAL** : The Nipple teat already sterilized or bacteriologically clean, with universal screw thread is ready for use.
- **HYGIENIC** : The teat cover guarantees physical and aseptic protection of the teat until the administration of the food to the baby.
- **LEAK RESISTANT** : The flexibility of the teat, its independency from the ring, and its wide return under the ring allows it to ensure its sealing when attached to the feeding bottle.

2 versions recognizable by their ring colour

Designed to facilitate a more natural feeding

The shape and material of the **Nipplie** teat have been carefully selected by Beldico's R&D team based on the opinion of hospital experts. In this way, the **Nipplie** teat is perfectly suited to the suckling physiology.

✔ The right balance between Softness & Hardness

The **Nipplie** teat is soft and extends into the mouth during feeding: it is positioned correctly in the buccal cavity, facilitates the peristaltic movement of the tongue and the transfer of milk to the oesophagus.

The **Nipplie** teat hardness allows for comfortable and uninterrupted feeding.

✔ A unique design

The **Nipplie** teat combines a **wide base** with an **anatomical shape** to help the child reproduce the natural suction movement during breast-feeding, reducing the risk of breast-teat confusion.

Safe feed flow rate
by micro-drilling with anti-tear stays

Soft, non-sticky, taste & odour-free material close to the natural feeling of the breast

Extra soft teat with round tip that **fits most babies' mouths**, including those who have difficulty nursing

3 appropriate flow rates to allow the right amount of milk to pass according to the baby's demand.

Wide base imitating the breast for better support to the baby and **encourages the opening of the baby's mouth***

For 3V teat

-  Slow Flow
-  Medium flow
-  Fast Flow

0% BPA, BPS, Phtalates, Latex

*Compared to a classic narrow-based teat

Standard Features

Name	Nipple disposable teats
Materials	Teat : Thermoplastic elastomer (TPE) Ring (TPE) : High Density Polyethylene (HDPE) Teat cover : Polypropylene (PP) Latex-free, phthalate-free, BPA-free, BPS-free warranty Recyclable materials, to be disposed of according to applicable hospital waste management procedures
Type of treatment	Sterilization NAS 10 ⁻⁶ by ETO or Disinfection NAS 10 ⁻² by Gamma irradiation
Directive 93/42/EEC	Medical device IIa

Nipple 1V and 3V teats are adaptable to the full range of Beldico bottles with universal screw thread, ready to use and single-use.

40 ml for Colostrum

The colostrum feeding bottle has a rounded bottom to allow caregivers to recover up to the last drop of the precious 1st breast milk.

240mL 130mL 80mL 50mL

Beldico develops, produces and markets medical devices for feeding babies and focuses particularly on the specific needs of newborns and premature babies.

Bottles - breastshields - teats - pacifiers
Breast milk expression and handling
Breast milk or formula warming
